

Dear Healdsburg from AAUW I so appreciate you guys for the Tech Trek experience it has meant so much to me. From all the other girls that could've have been chosen from my area you selected me. This opportunity made me feel worthy of myself which broden my knowdge in science. Once I got the one call about making it in my heart really skipped a beat. The past few days have been full of new experiances I've made a couple of friends I've learned from such as religions. One of my favorite moments were getting to go to Botany class which I used a microscope while there and saw pollen up at close which reminded me of rice. Also learned to sodder that was so much fun just nice to learn how to. A lesson that was nice could be getting tips/ideas for future highschool challenges. I've learned 15 elements from the periodic table in additio even more. I have also been a bit extra with the food from the cafetria trying new foods. Before coming to Tech Trek I wasn't interested in sciences I always thought of being in the Navy or Cop all I understand now is that I would maybe want to be an engineer. I also look forward to being a future Junior Counselor and girls looking up to me. Overall thank you for Tech Trek hope you have a good rest of your day. ♡

BE HAPPY

From, S a M a n t h A
