Dear Healdsburg AAUW branch,
I am so grateful to have been selected for this incredible opportunity to increase my fascination in STEM. I've experienced wonderful activities that have opened my mind to more in STEM and learned amazing advice that will stick with me for my future. I'm in the core class, Engineering, and have made different versions of flash lights, lit up light bulbs with household items, and have gotten even more familiar with the Creativity of STEM. I have felt incredibly inspired here and have made new connections with other campers. I really enjoyed going to the Sonoma Water Agency to learn about where our water was coming from, felt super curious looking through microscopes, and discovering bugs up close in the river. Thank you so much for this experience!

Sincerely,
Valeria
